## Koolbabe Hideaway

Provides a continuous supply of chilled fresh filtered water.

Chills an ample volume of water even for the largest family and all its guests.

## Water and Your Body

Most of us do not drink enough water, which is a vital element for healthy looking skin. Every part of the body depends on water. It regulates body temperature, transports nutrients and oxygen, carries away waste, helps detoxify kidneys and liver and can even cushion the body from injury. Kidneys work less efficiently when body and mind become sluggish due to dehydration. At least eight glasses a day or two litres, is recommended, but you may need more on hot days or during exercise.

**Koolbabe encourages you and your family to drink more water for a healthier lifestyle**

H<sub>2</sub>O

### Top Tips

Keep water on view in your kitchen or on your desk at work – aim to drink the equivalent of a bottle every day. Preferably two.

For every 'dehydrating' beverage, you should drink another glass of water!

Caffeinated drinks such as tea and coffee are not water substitutes; they will further dehydrate.

If you cannot do without hot drinks, switch to decaffeinated versions and try herbal teas instead, or even a squeeze of lemon juice in hot water.

**Don't rely on thirst to tell you when to drink; by the time you feel thirsty, you're already mildly dehydrated.**

## Water and Children

### The Benefits of Children Drinking Water at School

Children need to drink at least 3-4 glasses of water per day whilst at school and even more when exercising in warm weather. Schools and the government now insist on children drinking more water.

### Water and Health

- Drinking water throughout the day is an important way of protecting health and contributing to well-being;
- Drinking plenty of water can help to prevent a range of short and long term health problems from headaches, bladder, and bowel problems to cancer;
- Water is a healthy drink and does not damage teeth, unlike still and fizzy soft drinks high in sugar, additives, artificial sweeteners and caffeine.

### Water and Learning

- When we are thirsty our mental performance declines by 10%
- Mental performance improves with frequent intakes of small amounts of water;
- A child's concentration improves when they are not distracted by feelings of thirst, tiredness and irritability.
- Children achieve more if they are healthy and alert. Schools and parents can help by giving them access to a supply of freshly chilled water to maintain concentration and well-being.

**Koolbabe will encourage children to continue drinking water at home, during school holidays and at weekends.**

**The kids will love it!**

**Koolbabe offers the best cooling capacity for its size in the world.**

- **Beneficial to everyone and easy to use**
- **High quality compact unit (12 inch cube) hides neatly under the sink**
- **Save money by using mains water you will never need to buy bottled water again**
- **Hygienic - using our own design of 'direct chill' cooling technology - which is the most hygienic and efficient method of cooling available today - only cools water you use**
- **Saves on fridge space**
- **Filtered water with tea, coffee, cold drinks and cooking, brings out the real taste in your food and drink**
- **Simple DIY installation if required - supplied complete with screw on mains water connector, water pipes, swan neck water dispenser and simple push fit connectors**
